

ABSTRACT OF THE DISCLOSURE

A transmission type display device includes: a backlight source; a display element, which is disposed in front of the backlight source and includes at least one polarizer; a light diffusing element, which is disposed in front of the display element; and a polarizing element, which is disposed in front of the light diffusing element. In this display device, the polarizer included in the display element faces the light diffusing element, and an absorption axis of the polarizing element is substantially aligned with that of the polarizer.
